VastuScan

PRINTABLE CHECKLIST

Vastu checks before you list your home

Use this before you list your home. These are the placements our rules weigh most, and a few are deal-breakers that no remedy fixes.

- [ ] **1. Main door pada noted**
  Take the bearing of your main door's centre from the centre of the home. The 32 padas are 11.25° arcs; the south-west pair cannot be remedied.

- [ ] **2. Toilet directions noted**
  Note which of the 16 directions each toilet falls in. A toilet in the north-east is a Critical defect that no remedy changes.

- [ ] **3. Kitchen direction noted**
  Our rules put a kitchen's best placement in the south-east, and the second best in the north-west. The north-east is a Critical defect that no remedy fixes.

- [ ] **4. Master bedroom direction noted**
  Note the direction your master bedroom falls in. The north-east and the south-east are Major defects in our rules.

- [ ] **5. Staircase direction noted**
  A staircase in the north-east, or in the centre of the home, is a Critical defect that no remedy fixes.

- [ ] **6. Multi-storey stack checked**
  In a building with more than one floor, check whether any toilet sits directly above or below a puja room or a kitchen.

- [ ] **7. Centre of the home marked**
  Mark the exact centre point of the built area, then check that nothing heavy, such as a wall, pillar or structure, stands on it.

- [ ] **8. South-west corner checked**
  Look at the plan: is the south-west corner present, or cut or missing? Our rules treat this corner as the stability zone.

- [ ] **9. North-east corner checked**
  Check that the north-east corner is present, not cut off. Our rules treat it as the most auspicious zone.

- [ ] **10. Entrance kept clear**
  No shoe rack facing the door, no dustbin beside it, no broken or squeaky door. These are the entrance remedies our rules list.

Grades follow VastuScan's published Vastu rules. Vastu is traditional guidance; use it alongside a proper inspection.
