VastuScan

PRINTABLE CHECKLIST

Vastu checklist for a home with no floor plan

For a rented flat, an old home, or any home whose plan you don't have. Walk the eight zones from the centre with a phone compass, and check the critical defects first.

- [ ] **1. Stand at the centre**
  The centre is the Brahmasthan. Keep it open, light and clutter-free, with no toilet, kitchen, pillar or heavy structure on it.

- [ ] **2. Find north from the centre**
  Open your phone's compass app, hold it flat and away from metal furniture and appliances, and note north.

- [ ] **3. Name the room in each zone**
  Turn through all eight zones and write down what falls in each: kitchen, every toilet, bedrooms, puja shelf, staircase, water tank.

- [ ] **4. Main door direction**
  Face the door from the centre and note its zone. Where a zone holds two opposite padas, the exact pada decides the grade.

- [ ] **5. Kitchen zone**
  Ideal in the south-east, second choice in the north-west, Problematic in the north and south-west, and a Critical defect in the north-east.

- [ ] **6. Every toilet's zone**
  Ideal in the north-west, Problematic in the north and south-west, and a Critical defect in the north-east. Keep the toilet door away from the main door and kitchen door.

- [ ] **7. Sleeping rooms**
  The master bedroom is Ideal in the south-west, Acceptable in the south and west, and Problematic in the north-east, which suits a study or guest room better.

- [ ] **8. Staircase zone**
  Ideal in the south, south-west or west. A staircase in the north-east is a Critical defect.

- [ ] **9. What sits on the centre**
  A toilet, kitchen, staircase, storeroom, utility or water tank there is a Major Defect; a living room, foyer, lobby, passage or open courtyard is Ideal.

NOTES

Grades follow VastuScan's published Vastu rules. Vastu is traditional guidance; use it alongside a proper inspection.
