PRINTABLE CHECKLIST

Vastu checklist for a north-west-facing flat

Use this on a site visit for a north-west-facing flat. The main door's pada and the kitchen, toilets, staircase and centre decide the verdict.

- [ ] **1. Main door pada**
  Note the radial arc from the flat's centre to the main door. A north-west door is pada W8 (Papayakshma) or N1 (Roga); both are Problematic.

- [ ] **2. Main door not in the south-west**
  Padas S8 (Mriga) and W1 (Pitra) are the two Critical entrance padas, both in the south-west quarter.

- [ ] **3. No toilet in the north-east**
  A toilet in the north-east is a Critical defect: prosperity and spiritual blockage. Check every toilet against the north-east arc.

- [ ] **4. No kitchen in the north-east**
  A kitchen in the north-east is a Critical defect: fire in the water zone. Locate the kitchen's walls on the plan.

- [ ] **5. Staircase not in the north-east or the centre**
  A staircase in the north-east or on the centre (Brahmasthan) is a Critical defect. Check an internal staircase, not the common stair.

- [ ] **6. No toilet above or below the kitchen or puja room**
  In a multi-storey building, ask for the layout of the floor directly above and below. A toilet stacked there is a Critical defect.

- [ ] **7. Centre clear**
  Mark the centre of the flat. A wall, pillar or heavy structure on it is a major defect: the core energy flow is obstructed.

- [ ] **8. North-east corner present**
  A cut or missing north-east corner is a major defect: the most auspicious zone is absent. Check the outline of the plan.

- [ ] **9. Kitchen or toilet in the south-west**
  A kitchen or toilet in the south-west is a major defect, not a Critical one, and remedies apply. Note it before you commit.

- [ ] **10. Overhead water tank**
  An overhead tank in the north-east or south-east is a major defect. Ask where the building's tank sits.

Grades follow VastuScan's published Vastu rules. Vastu is traditional guidance; use it alongside a proper inspection.
