PRINTABLE CHECKLIST

Vastu check for a new home: the first things

Use this on the floor plan of the home you have just moved into, or before you sign. The Critical defects and the main door decide most of the verdict.

- [ ] **1. Toilet in the north-east**
  If the north-east zone holds a toilet, our rules grade it a Critical defect: severe prosperity and spiritual blockage.
- [ ] **2. Kitchen in the north-east**
  Fire in a water zone. A Critical defect: elemental conflict, mental stress and financial loss.
- [ ] **3. Main door in the south-west**
  Take the door's bearing from the centre. Mriga (S8) and Pitra (W1) are both Critical: isolation, diminished vitality and a weakened financial position.
- [ ] **4. Staircase in the north-east**
  A Critical defect, linked to head and spine (neurological) health.
- [ ] **5. Staircase at the centre**
  A Critical defect: it blocks the Brahmasthan, the core energy of the home.
- [ ] **6. Toilet above or below the puja room**
  In a multi-storey home, compare the floor plans. A Critical defect: spiritual contamination.
- [ ] **7. Toilet above or below the kitchen**
  In a multi-storey home, compare the floor plans. A Critical defect: a health and hygiene energy conflict.
- [ ] **8. Main door's pada**
  Read the bearing within 11.25° and name the pada. The favourable ones are N3, N4, N5, E3, E4, S3, S4, W3 and W4.
- [ ] **9. What sits at the centre**
  Open, clutter-free and lit is Ideal. A toilet, kitchen, storeroom or water tank there is Problematic.
- [ ] **10. Cut or missing north-east corner**
  Check the outline. If the north-east corner is absent or cut, the most auspicious zone is missing: a Major defect, but remedies help.
- [ ] **11. Overhead water tank in the north-east or south-east**
  Note where the tank sits. Either one is a Major defect.

Grades follow VastuScan's published Vastu rules. Vastu is traditional guidance; use it alongside a proper inspection.
