PRINTABLE CHECKLIST

Main door Vastu checklist

For a home you are buying or living in. Take the bearing from the centre of the home to the middle of the door opening, with a compass set to true north.

- [ ] **1. Door bearing read from the centre of the home**
  Line from the centre to the middle of the door opening; note the degrees from true north.
- [ ] **2. The door's pada named (one of 32)**
  Each pada is 11.25°. The pada, not the wall, decides the grade.
- [ ] **3. Not in the south-west: Mriga (213.75°–225°) or Pitra (225°–236.25°)**
  Both are Critical. No remedy changes them; only moving the door does.
- [ ] **4. Ideal padas checked**
  Mukhya, Bhallat (north), Jayant, Mahendra (east), Vitatha, Grihakshata (south), Sugriva, Pushpadanta (west).
- [ ] **5. If Pusha (146.25°–157.5°): which reading applies**
  Auspicious for a salaried household, inauspicious for a business-owning one.
- [ ] **6. Largest door in the home, opening inward**
  Opening to the right as you enter; solid wood preferred over glass or metal.
- [ ] **7. No creaks, cracks or peeling paint**
  Standard height or taller; a swing door rather than sliding or automatic.
- [ ] **8. No toilet door visible from the entrance**
  If it cannot be avoided, keep that toilet door closed.
- [ ] **9. No mirror facing the door**
  Nor a shoe rack directly in front, a dustbin, or junk near the entrance.
- [ ] **10. Nothing heavy stored above the door**
  Keep the area over and around the entrance clear.

NOTES

Grades follow VastuScan's published Vastu rules. Vastu is traditional guidance; use it alongside a proper inspection.
